Constituents and additives

Effect on the substrate

Slightly decomposed raised-bog peat (white peat)

increases the air capacity and improves the structural stability

Lime (Calcium carbonate)

adapts perfectly the pH-value to the specific requirements of the plants

Bentonit of high sorption capacity

the fine granulation provides for an optimal distribution of the clay. Its high buffer capacity counteracts fluctuations of salinity and pH-value

Wetting agent Instant plus

improves the water uptake of the substrate, particularly of the dry material

Top-Quality compound fertilizer

supplies the plants immediately with all macro and micro-nutrients

Micro-nutrient fertilizer

supplies the plants additionally with: Mg, B, Cu, Mn, Mo, Fe and Zn

Advice:

The product should be stored in a dry and cool place and protected against direct sunlight. Our advice would be to use up the product as soon as possible. When stored for a longer period of time, the product should be analyzed before it is used.
